INFORMATIZATION OF EDUCATIONAL PROCESS IN TEACHING CRIMINAL LEGAL DISCIPLINES IN THE INSTITUTE OF LAW AND PSYCHOLOGY NATIONAL ACADEMY OF INTERNAL AFFAIRS

The authors show that the development and introduction of efficient information technology training corresponds to the general concept of the development of higher education in Ukraine. The essence of this concept is to prepare such educational technologies that enable the student not only basic knowledge and skills, but also the ability to form the active creative professional and social activities. Based on the analysis of the current state of information law schools found that, in terms of methodology, the development and use of computer information technology training developed in two directions.

The first direction is based on the principles of programmed instruction and linked to the development and use of automated training systems in various academic disciplines. Second – is the creation of individual educational computer programs, software packages, components of automated systems for the automation of the study significant array of educational information.

Also shows that innovative learning technologies that reflect the sense of their future profession, formed as a specialist business and is a virtual ground on which the subjects of the educational process can develop skills conditions close to reality. Suggested as an alternative for the informatization of teaching Criminal Law for each of the areas of basic training students to use specialized information and referral program, which is a prototype of a professional workstation.

As a result, stresses that the main task of informatization of educational process is to create an educational information environ ment that will enhance the cognitive activity of students and trainees and their information culture and allow deeper master basic legal disciplines, as well as to stimulate the process of adapting to future lawyers professional work.

Keywords: informatization of educational process; penal discipline; technology training.
