Administrative and Legal Management Mechanism of the Financial and Economic Risks in Conditions of Information War and Extraordinary Legal Regimes

The main financial and economic risks have the informative nature, which is especially evident on the background of total information society. Such information and financial risks significantly increase in condition of information war.

In today's hybrid war, Ukraine increasingly feels the need in certain extraordinary administrative law regimes, the main purpose of which is to regulate the basic principles of state, administrative, social and financial-economic character in extraordinary situations.

Under «information risk» we understand the risk that information given to users is not reliable, contains significant deviations and/or not true or partially true.

The structure and character of information threats in the economic and financial field, indicated in the Decree, in general meet modern theoretical and methodological approaches of specialists and can serve as the basis for their detection and determination. However, it is difficult not to notice that some of them are permanent and active,

so that really threaten the state, society and every person. Others under current conditions are passive, more likely.

To solve the legal provision risks it is important to understand theoretically their legal nature as an object of legal regulation.

Risks are transnational in nature and tend to spread rapidly (via system (economic) relations of the state, and therefore consider them only in Ukraine impossible.

Risks cannot be viewed exclusively in public or private law. They have global character in society. The system of counteracting should consist of international and national standard regulations, and finally – local regulations.

Keywords: financial and economical risks; standard regulation; management; information war; extraordinary legal regimes.
